

Sogecable and Orange have signed agreements to develop and to launch different joint fixed and mobile telecommunications services throughout 2008

Sogecable and Orange are planning to launch, at the beginning of 2008, one joint "triple-play" offer, bundling the ADSL broadband access and Orange's calling services with the satellite pay tv Digital + of Sogecable.

In addition, this agreement will allow all Orange's customers with a 3G handset to enjoy Digital + Mobile, the television channels platform for mobile that includes today more than twenty channels: Jetix, Channel + Mobile, Four, CNN +, Travel, Channel + Sports Mobile, Channel + DCine Móvil, Channel + Mobile Comedy and Ticket office X. Digital + Mobile allows to enjoy the television without delays and downloads.

Sogecable and Orange have also reached an agreement to develop a high definition version of Digital + mobile during the next months. The channels of Sogecable of mobile television's platform will come in high definition to the screens of Orange's customers throughout 2008. This new technology allows to receive programs with a quality two times higher than the one currently offered. Both the video and the audio will have a better definition.

Likewise, Sogecable and Orange have agreed to develop Digital Guide+, an exclusive service that will allow all Orange customers to access the information and programming services of Digital +. Digital Guide+ offers the functionalities of the Guide of the platform of television on the mobile handsets. Thanks to this service, customers will be able to consult, on their mobile phones, the programming of Digital+ for the next days, to search for the show of their favourite program or to know the movies, football matches and sports events that are planned.

Sogecable and Orange will continue exploring the possibilities of marketing content under demand for mobile devices.
