

Orange Cyberdefense Enhances Its Detection Capabilities with Qevlar AI's Artificial Intelligence Solution

Orange Cyberdefense, Europe's leading cybersecurity services provider, announces a partnership with Qevlar AI to strengthen its advanced detection services.

By combining its Cyber Threat Intelligence database with Qevlar's artificial intelligence solution, Orange Cyberdefense is increasing its detection and remediation capabilities for security alerts. This partnership enables unparalleled responsiveness to counter increasingly sophisticated attacks.

Proven Innovation by Orange Cyberdefense for Advanced Detection

Through the gradual integration of Qevlar's AI platform into its Security Operation Centers (SOCs), Orange Cyberdefense will be able to:

- Improve the processing of security alerts and events, which are constantly growing;
- Increase its responsiveness to attacks, both in detection and remediation;
- Conduct deeper analysis of weak signals;
- More quickly identify compromises across all customer environments.

A Rapidly Evolving Threat Landscape

In the face of an exponential rise in security alerts and the emergence of increasingly elaborate attack techniques, the ability to detect, analyze, and respond swiftly has become a critical challenge for organizational security.

For nearly two decades, Orange Cyberdefense has developed a Cyber Threat Intelligence database that references information on attacker groups, their tools, and methods. This knowledge base is a unique data source in Europe, primarily derived from Orange Cyberdefense's managed services, analyst investigations, and crisis management activities for its customers.

Traditional detection approaches are now reaching their limits. In this context, AI technologies like Qevlar's provide a complementary response to modern threats.

The Power of Collective Intelligence and Cyber Threat Intelligence

By combining its qualified intelligence data with Qevlar AI's engine, Orange Cyberdefense can detect targeted attack campaigns even faster. Each qualified alert contributes to improving overall detection for all its managed security service customers, regardless of the technologies deployed. This alliance creates a network effect that expands detection surface and enhances reaction capabilities.

Frédéric Zink, Managing Director, France, Orange Cyberdefense :

"In a context of accelerating cyber threats, this partnership with Qevlar marks a new step in protecting our customers by combining human and artificial intelligence. We can now detect threats more quickly and accurately, while focusing our analysts' expertise on the most complex and critical incidents."

Ahmed Achchak, Chief Executive Officer, Qevlar AI :

"The deployment of our AI solution by Orange Cyberdefense provides new validation of Qevlar's reliability and operational impact. Powered by Orange Cyberdefense's intelligence base, our technology drives a step change: converting faster reactions into true preventive capability, serving thousands of companies across Europe and around the globe."

Orange Cyberdefense

Orange Cyberdefense is the Orange Group's dedicated cybersecurity entity. It protects 50,000 companies of all sizes, from the beginning to the end of the threat lifecycle, in over 160 countries. As Europe's leading cybersecurity services provider, we are a trusted cyber partner, offering a secure digital space that creates value for organizations and individuals alike.

Our service capabilities are rooted in research and intelligence, enabling us to provide our customers with unparalleled knowledge of current and emerging threats. With over 30 years of experience in information security, more than 3,200 multidisciplinary experts, and 36 detection centers worldwide, we are equipped to effectively address our customers' global and local challenges.

Humans are at the heart of cybersecurity and at the core of everything we do to build a safer digital society.

Qevlar

Qevlar AI provides an agentic AI solution that automates and deepens security investigations, drastically reducing analysis and incident response times.

The platform, fully autonomous, is adopted in production by Fortune 500 companies and helps security teams transition from a reactive posture to a proactive strategy.
